PROJECTS

1. **USSD VOTING SYSTEM**

 A php and java Combined based system that uses a ussd code to carry out an election in an instituition setup, case example for a university. It is a project which I did individually in my 4th year of study at the university for my degree award.

2. **PataHao**

Application An android based software application which enables students to search for hostels and rental houses within a campus setup for easy booking of the houses within the

application. A project done for the Developer Student Clubs(DSC) Challenge for 2019, where I was responsible for its coding. Link: https://github.com/GeorgeOjunga/HaoApp

3. Vehicle Parking Management System

A java based application which is to be used to manage the parking slots of a given instituition, it manages the slots, booking and checking in and out of the slots. This was an individual project.
